Practical No.: - 10

Aim: Introduction to GitHub, creating a remote repository and adding a file to it using GitHub.

Theory:-

What is GitHub?

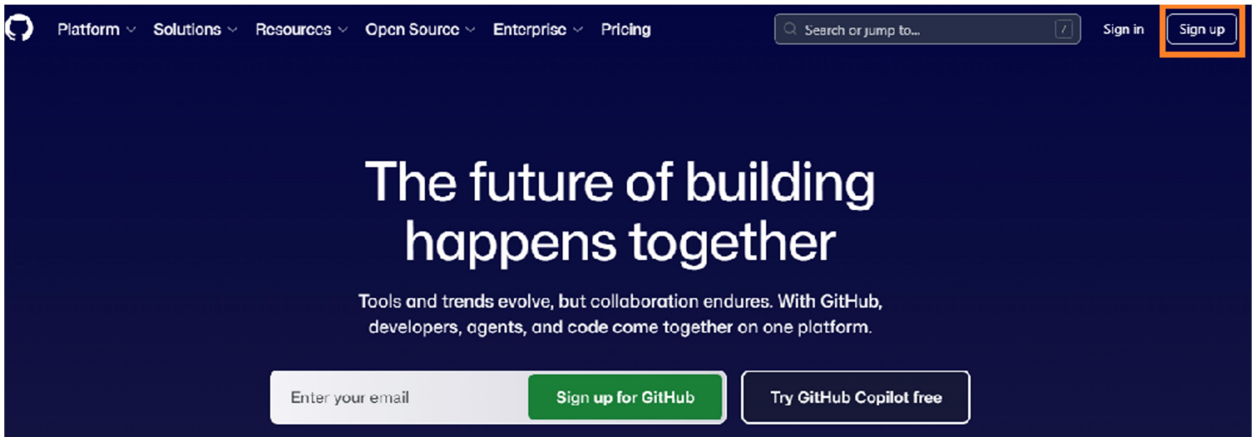
GitHub is a web-based platform used to store, manage, and share source code using version control. It allows multiple users to collaborate on projects, track changes, and maintain different versions of files.

Key Features of GitHub

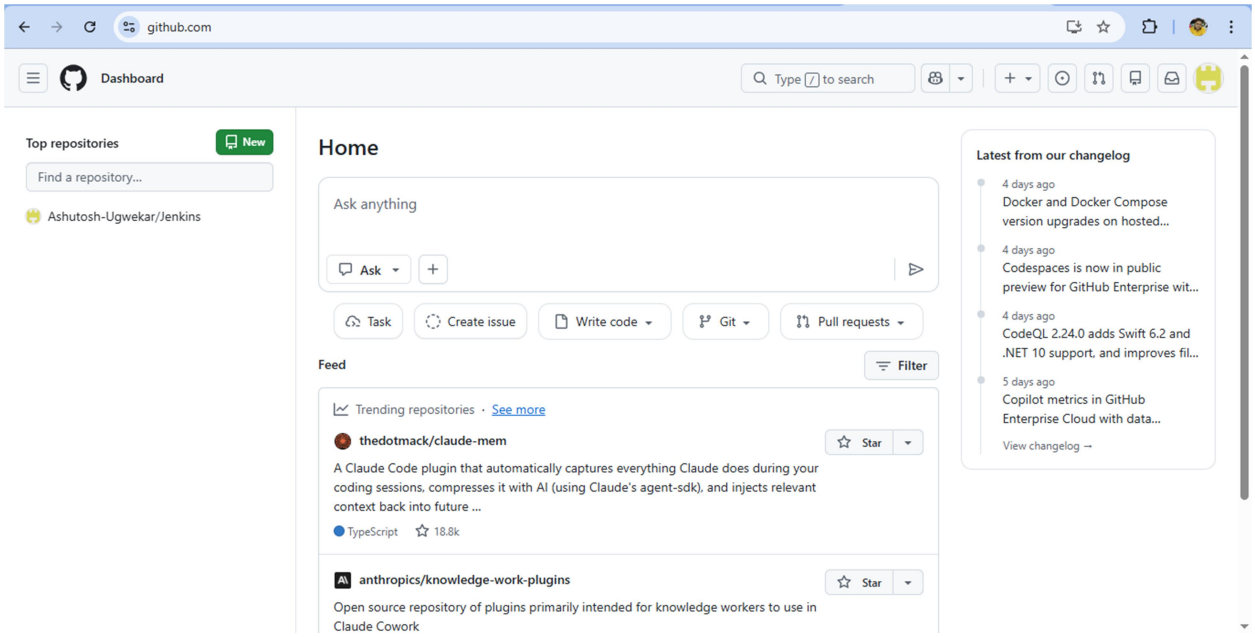
- Online code hosting
- Version history tracking
- Collaboration with teams
- Issue tracking
- Pull requests and reviews
- Open-source project hosting

How to Create a Free GitHub Account

1. Open a web browser and go to https://github.com/ and click on '**Sign up**'.

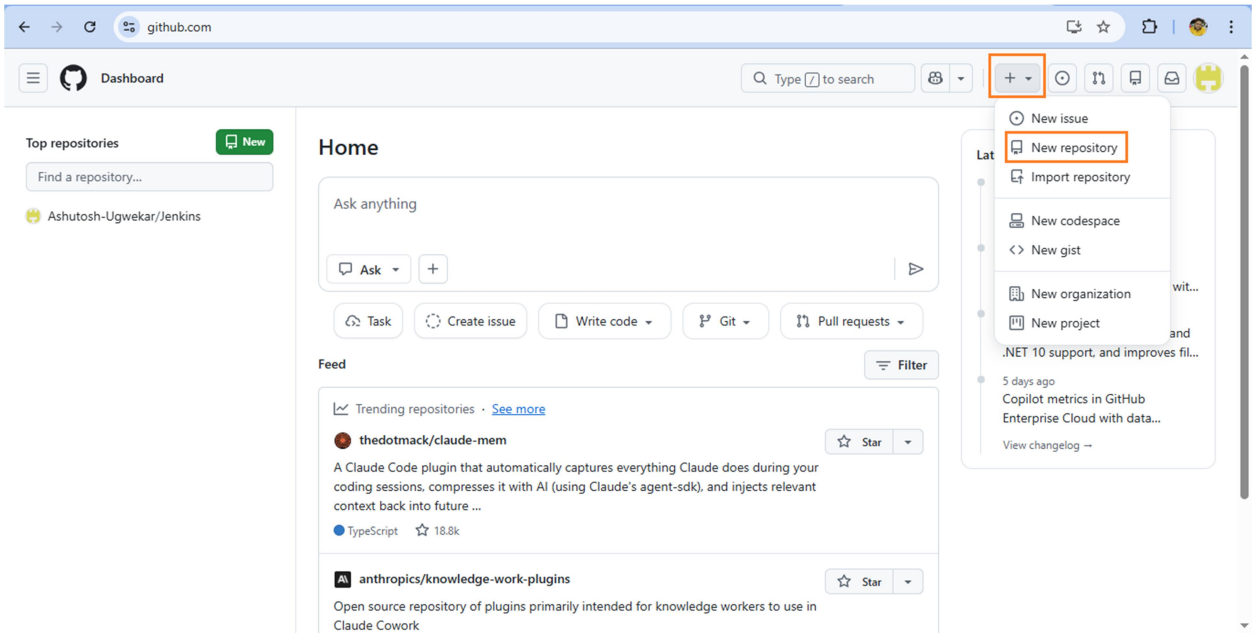


2. Enter the details, verify your email address (if required) and complete the account setup. After successful registration, the GitHub dashboard will appear as shown below.

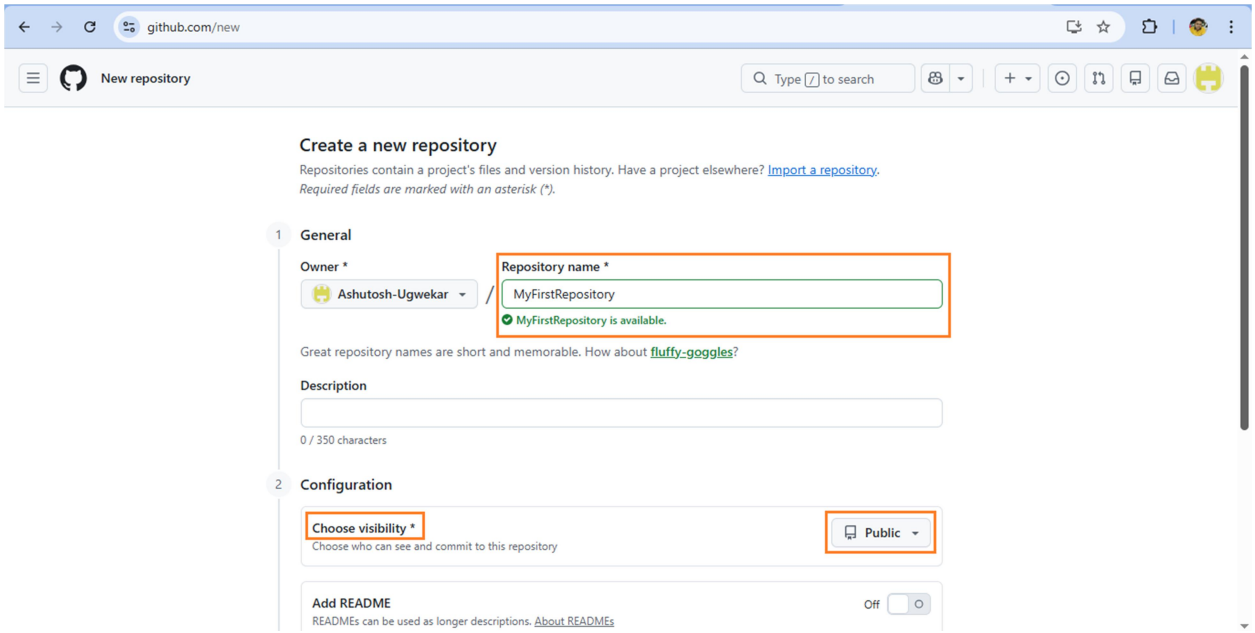


How to Create a Repository on GitHub

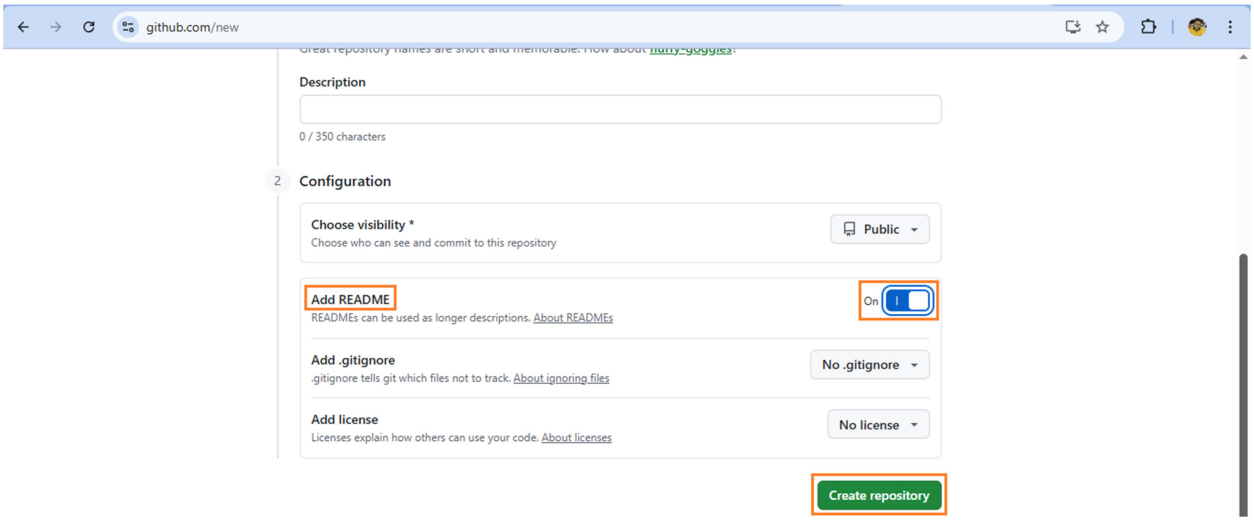
1. Login to your GitHub account and click on the **"+"** icon (top-right corner).



2. Enter repository name (e.g., **MyFirstRepository**) and choose visibility as "**Public**".

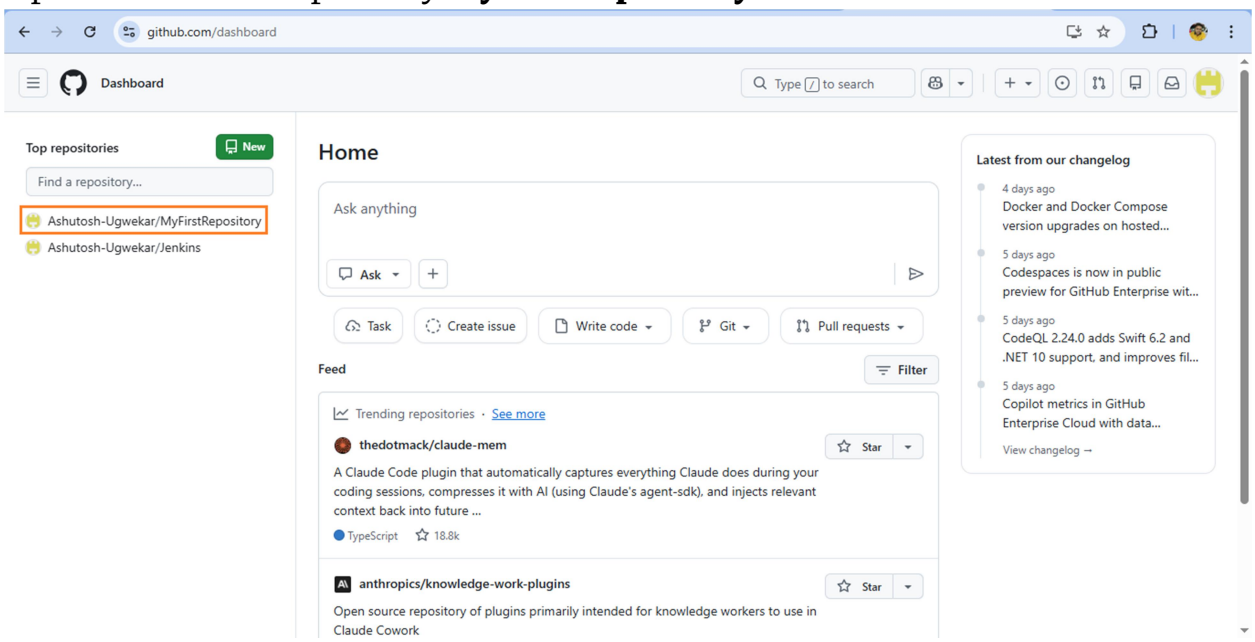


3. Select "**Add README**" and click "**Create repository**".

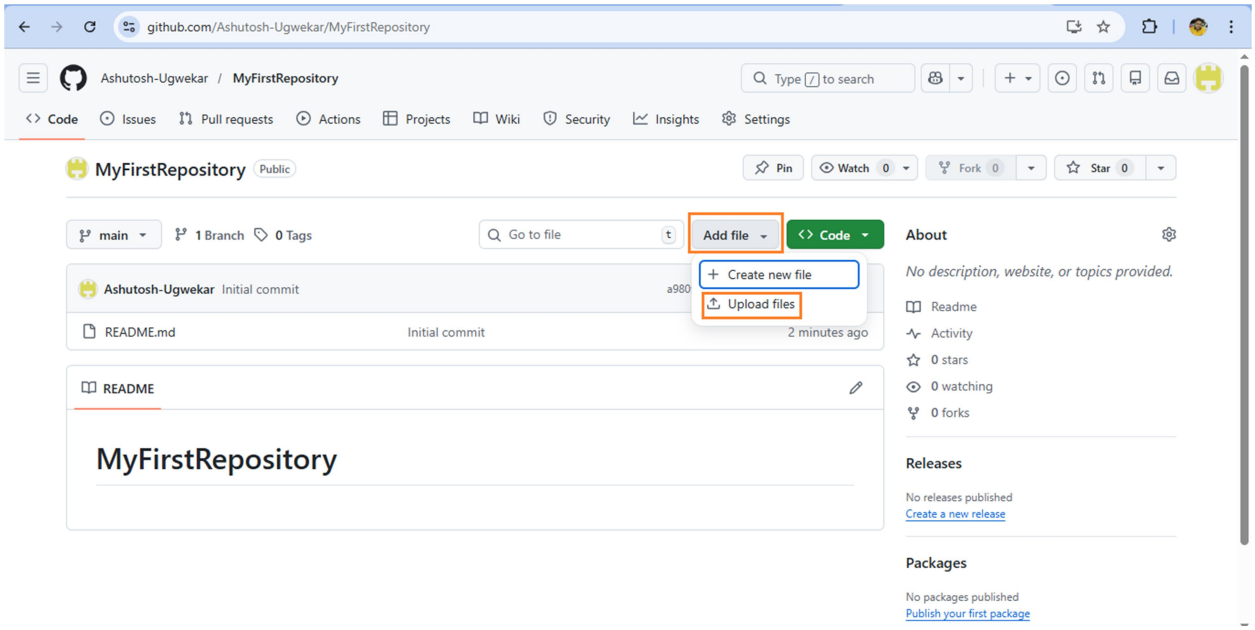


Uploading Files to GitHub

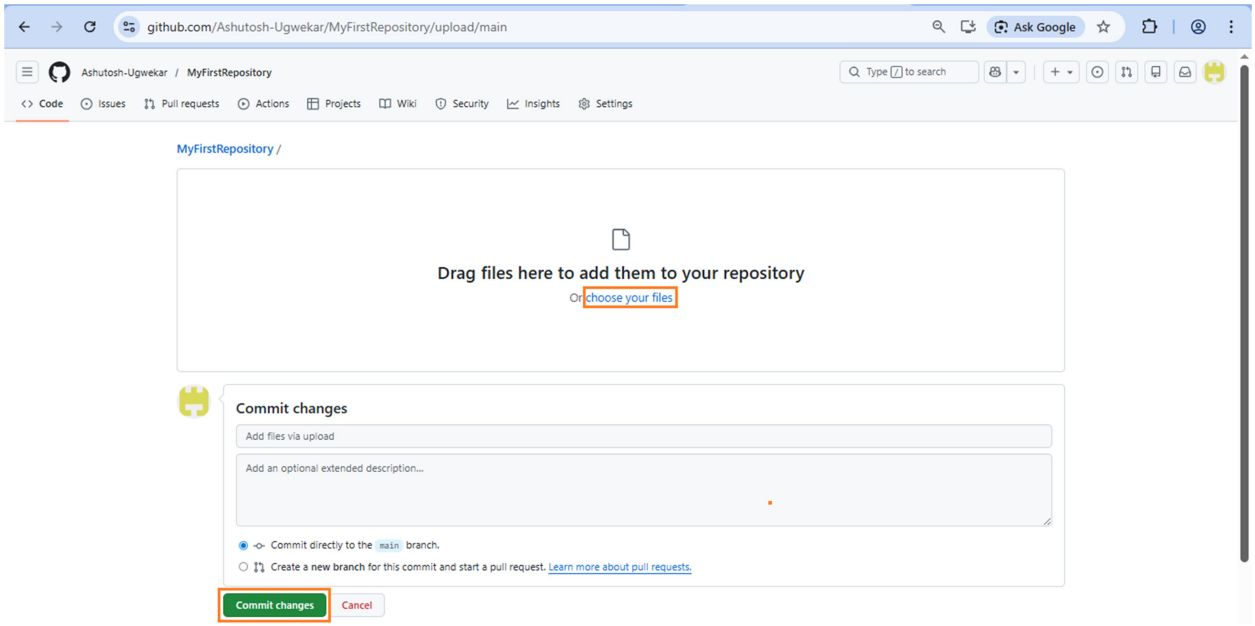
1. Open the created repository **MyFirstRepository**.

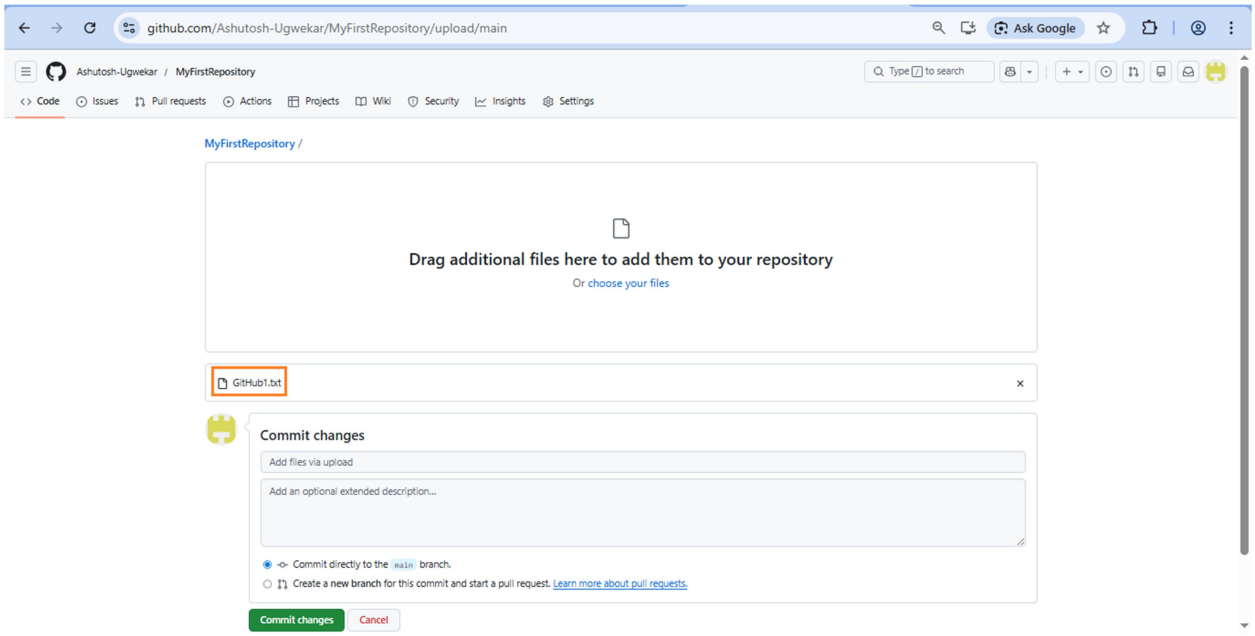


2. Click on "**Add file**" and select "**Upload Files**"..

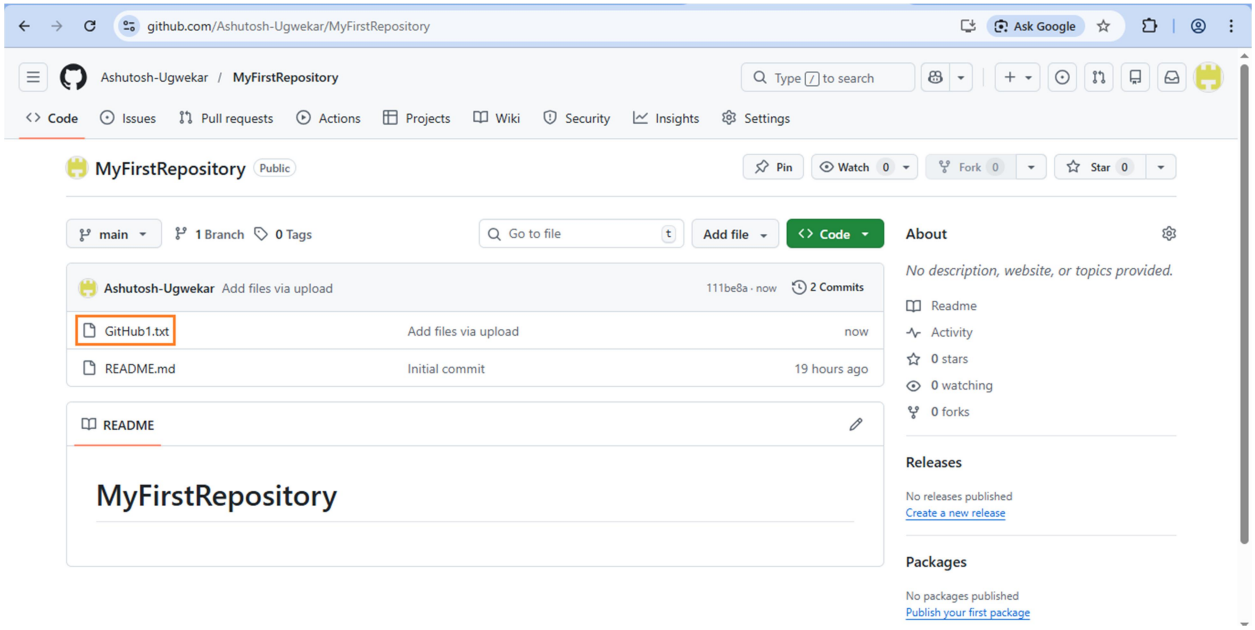


3. Choose a file from your computer and Click *Commit changes*.





The file will now be stored in the GitHub repository.



Conclusion:

Thus we have studied GitHub, created a remote repository and added a file to it using GitHub.
